**CLO SYSTEMS SHOWS SUB \$300 ROBOTIC
FLAT PANEL FIREPLACE MOUNTING SOLUTION AT CES**

Programmable, Remote Controlled Mount with Variable 0-15 Degree Tilt Down Eliminates Reflection and Off-Axis Viewing Problems while Reducing Potential Damage to Displays From Fireplace Heat

LAS VEGAS, January 7, 2008 – CLO Systems, an industry leader in advanced mounting solutions for flat panel displays, is showing its newly developed T2™ at this week's 2008 International Consumer Electronics Show in Las Vegas. T2 is today's most affordable remote controlled robotic wall mount specifically designed for flat panel TVs mounted above the fireplace or above eye level. In addition to helping eliminate heat issues while in its stowed position, the T2 solves the three major complaints associated with viewing flat panel TVs installed above a fireplace: glare, reflection and off-axis viewing problems such as color shift and loss of picture detail. T2's remote controlled operation and two user-programmable memory presets provide custom integrators and homeowners with a vast array of on-axis mounting location options.

Building on the success of CLO's award-winning X-arm, T2's wide range of variable downward tilt movement (0-15-degrees) provides an optimum glare-free, on-axis viewing experience for viewers seated on the couch and floor. At the touch of a button on the remote control, 2 programmable memories recall stored viewing preferences. When not in use, T2 fully retracts the display to an aesthetically pleasing and flush position residing 3.2 inches from the wall. The retracted, completely vertical stowage position (0 degrees of tilt down) eliminates potential damage to the TV caused by fireplace heat being trapped in the display's upper bezel. Auto Mode is a new feature on the T2 that automatically retracts the television when

it is turned off and tilts the television for viewing when the set is turned on. This completely eliminates the need to use the separate T2 remote when Auto Mode is selected.

“In practical terms, T2 is a breakthrough product in technology, convenience and price point,” said Ken Nguyen, director of sales and marketing at CLO Systems. “It is purpose-built to solve real-world viewing problems while seated in the viewing position. Who wants to get off the couch to manually adjust the mount every time room lighting conditions change or during sunrise and sunsets when high ambient and direct sunlight are especially problematic?”

Invisible from the front of the TV, T2 is suitable for flat panel displays between 32 and 60-inch sizes (up to 150 pounds). T2 is easily installed in the same manner as any conventional manual wall-mounting unit. A universal mounting attachment kit is provided to facilitate easy coupling with the flat panel display, and a universal IR remote control is provided to control the T2

Availability and Sizes

T2 is available now and is designed to accommodate either plasma or LCD flat panel TVs in 32 to 60-inch sizes. The CLO mounts are also on display in South Hall 1, booth # 20923 and 20425 with CLO’s strategic partner Chief | Sanus Systems (CSAV), www.chiefmfg.com and www.sanus.com.

About CLO Systems, LLC

California-based CLO Systems, LLC was founded in 2005 to provide advanced robotic and manual mounting solutions for challenging consumer and Pro AV installations. CLO’s team of robotic engineers and designers create and deliver inspired, elegant mounting solutions for today’s demanding flat panel display applications. For more information on CLO Systems, please visit www.closystems.com
